GENERATING AI ART: MAN AND WOMAN

Prompt Engineering Notes

AI

Concept

[COMPOSITION SCHEME]

A perfectly symmetrical cinematic digital-art composition that uses a surreal double-exposure effect to merge a detailed seaside landscape within and around two vertical, outward-facing profile portraits.

[THE TWO HALVES]

The central axis is a sharp vertical divide: the right half features a photorealistic female profile, a young woman facing right, while the left half shows a photorealistic male profile, a young man facing left. Their features act as a canvas for a wide summer beach and sea.

[ENVIRONMENT]

Rippling sea, waves, beach and palm trees, blending into a dramatic, glowing sunset sky around the two profiles.

[LIGHTING AND STYLE]

Soft, cinematic light, strong contrast between the cool tones and the warm orange sunset light. High contrast, clean composition, artistic photography style, 8K resolution.

Master Prompt · EN

A perfectly symmetrical piece of cinematic digital art that uses a surreal double-exposure effect to merge a detailed seaside landscape within and around two vertical outward-facing profile portraits. A sharp vertical divide marks the center: on the right side appears the photorealistic profile of a young woman facing right, while on the left side is the photorealistic profile of a young man facing left. Their features, rendered with ultra-detailed precision and crisp focus, act as a canvas for a wide summer coastline — rippling sea, waves, beach, and palm trees. The environment transitions into a dramatic, glowing sunset sky above and around them. The lighting is soft and cinematic, defined by a strong contrast between the cool white and gray tones of the mountains and the powerful warm orange light cast by the sunset. The deep atmospheric perspective creates a moody, emotional, and immersive feeling. High contrast, clean composition, artistic photography style, 8K resolution.
